

# Our Proposals - Summary

Canner's Lane Energy Park is a proposed 1GW Battery Energy Storage System (BESS), and transmission connected substation, located between the A1 and the East Coast Main Line, southeast of Great Ponton.

The land within our proposal is approximately 40 hectares, which would include infrastructure and landscaping to ensure long-term environmental benefits for South Kesteven.

Our proposals would deliver an increase in biodiversity net gain substantially above the industry standard and allow nature to thrive.
